Senior Backend Engineer with 5+ years building AI-integrated, high-throughput systems in ad-tech. Currently own the execution layer and MCP (Model Context Protocol) tool servers powering Pixis' LLM-driven advertising assistant — bridging natural-language chat to real-time, multi-platform campaign management across Meta, Google Ads, DV360, TikTok, and LinkedIn. Strong in Python, distributed systems, LLM tool-use, OAuth, and production-grade API design.

Experience

● Senior Software Engineer (SDE 3) — Pixis Mar 2023 – Present

- Architected the execution layer for Pixis' AI advertising assistant — ~30 bulk action handlers (campaigns, ad groups, ads, audiences, bidding strategies, conversion actions) executing natural-language requests from an LLM chat interface with partial-failure and idempotency semantics at batch level.
- Built MCP (Model Context Protocol) servers bridging LLMs to five ad platforms (Google Ads, Meta, DV360, TikTok, LinkedIn) over JSON-RPC/ Streamable HTTP, with per-account OAuth managed via a dedicated Token Management Service.
- Proactively addressed the YouTube Ads API limitation, developing a Google Ads script solution to support recommendations and positively impact company revenue.
- Collaborated with data scientists and product managers for seamless AI model integration into the Execution Engine.
- Successfully onboarded multiple ads platforms (Facebook, Google, Pinterest, Apple, LinkedIn, etc.) to streamline AI-powered recommendations and optimise ad spend.

● Software Engineer — Pixis (Performance) Apr 2022 – Mar 2023

- Owned the Execution Engine — a Django/Celery service that executes AI-generated ad recommendations across six platforms (Meta, Google, Bing, TikTok, Pinterest, DV360) at campaign / ad-group / ad / keyword levels with retry, idempotency, and partial-failure semantics.
- Integrated Facebook and Google Ads platforms end-to-end, enabling AI-driven bidding, budgeting, targeting, and creative recommendations.
- Redesigned two core services to cut recommendation execution latency by [80%], meaningfully reducing time-to-apply for AI suggestions.
- Built a unified ad-spend adjustment service consolidating per- platform pipelines, improving operational efficiency and reducing duplicated logic across platform integrations.

● Software Engineer I — Pixis (Cocreate) Sep 2020 – Mar 2022

- Designed and shipped an end-to-end notification microservice (in- app, email, and management tooling) — now integral to the product.
- Built a real-time collaboration layer using Django Channels and WebSockets for multi-user editing of design documents.
- Developed an audit + analytics service tracking user activity and product events, powering downstream product insights.
- Implemented secure public-sharing links for designs and documents with password protection, expiration, and validation controls.
- Owned multiple services powering the creative-and-approval flow and designer collaboration features.

● Intern - IDfy - Jan 2020 - Jun 2020

- Automated background verification data scraping, streamlining IDfy's onboarding process and improving data accuracy.
- Revamped in-house mailing service, solving communication bottlenecks and improving efficiency.
- Developed REST APIs for the BGV project, enabling secure and reliable data transfer for background verification.

Achievements

- High Performer Certificate (×2) — awarded by Senior Engineering Manager and Director of Engineering for contributions to Pixis' core AI execution platform.
- Cut GCP infrastructure spend by auditing and eliminating redundant MySQL instances and unused services — delivered recurring monthly savings.
- Led the Google Ads execution layer from zero to feature parity with Meta in under a quarter, enabling AI-driven Google Ads campaign management via the chat assistant.

Education

- BITS Pilani — M.E., Software Systems (Dept. of Computer Science & Engineering) 2018 – 2020
- Mumbai University — B.E., Electronics & Telecommunication Engineering 2012 – 2016

Skills

- Languages & Runtimes: Python, JavaScript, TypeScript, Node.js
- Frameworks: Django, FastAPI, Flask, Express.js, React
- AI / LLM: MCP (Model Context Protocol), JSON-RPC, Anthropic & OpenAI SDKs, LLM tool utilization, streaming agents, LangChain, RAG
- Data & Messaging: MongoDB, PostgreSQL, MySQL, Redis, BullMQ, Celery, SQL
- Cloud & DevOps: AWS, GCP, Docker, Kubernetes
- Validation & Schemas: Zod, JSON Schema, Pydantic
- Authentication: Auth0, OAuth 2.0, JWT, OpenID Connect
